

**Unit 1:**  
**Lesson 02**

**Negative numbers, opposites, absolute value**  
**Inequalities**

**Negative** numbers are to the left of the origin (0) while positive numbers are to the right.

**Opposite** numbers are mirror images of each other across the origin.

**Example 1:** Locate 7 on a number line and then locate its opposite.

**Example 2:** Locate -3 on a number line and then locate its opposite.

The **absolute value** of a number (indicated with vertical bars,  $|4|$ ) is the distance of a number from the origin. The absolute value of a number is **always positive**.

**Example 3:**  $|16| = ?$

**Example 4:**  $|-4| = ?$

When an expression is inside an absolute value,

- simplify the expression with PEMDAS (down to a **single number**),
- and then take the absolute value of that number.

**Example 5:**  $|9 - 2 \cdot 3|$

$$|9 - 2 \cdot 3| = |9 - 6| = |3| = \boxed{3}$$

**Example 6:** In the following table, fill in the blank areas with the appropriate integer that best describes the phrase, its opposite, and its absolute value.

Description	Integer	Opposite	Absolute value
A price <b>increase</b> of \$4	<b>4</b>	<b>-4</b>	<b>4</b>
Ten degrees <b>below</b> freezing	<b>-10</b>	<b>10</b>	<b>10</b>
A bank <b>deposit</b> of \$40	<b>40</b>	<b>-40</b>	<b>40</b>
3 points <b>off</b> on a test question	<b>-3</b>	<b>3</b>	<b>3</b>
A five point <b>bonus</b> on a test	<b>5</b>	<b>-5</b>	<b>5</b>

Any number,  $a$ , that lies to the **left** on a number line of another number,  $b$ , is said to be **less** than  $b$ :

$$a < b \quad (\text{read this as, "a is less than b."})$$

Any number,  $c$ , that lies to the **right** on a number line of another number,  $d$ , is said to be **greater** than  $d$ :

$$c > d \quad (\text{read this as, "c is greater than d."})$$

An easy way to remember the **symbols** of these **inequality** relationships is, "The alligator eats the big one."

Use the number line above to fill in the appropriate symbol ( $<$ ,  $>$ , or  $=$ ) in the blanks in the examples below. Give the reasons for your choices.

- Example 7:  $-4$   $<$   $-2$  *because  $-4$  lies to the left of  $-2$*
- Example 8:  $1$   $>$   $-2$  *because  $1$  lies to the right of  $-2$*
- Example 9:  $b$   $>$   $a$  *because  $b$  lies to the right of  $a$*
- Example 10:  $a$   $<$   $c$  *because  $a$  lies to the left of  $c$*
- Example 11:  $|-2|$   $=$   $2$  *because absolute value is always positive*

Consider  $-2$  on a number line as seen at the top of this page. It is represented to the **left** of the origin since it is a negative number. The point  $b$  is also to the left of the origin, so what would be the meaning of  $-b$ ?

The meaning of the **negative of a variable** is that it is the **opposite** of that variable.

**Example 12:** Redraw the number line at the top of this page and locate  $-c$ .

**Example 13:** Redraw the number line at the top of this page and locate  $-b$ .

**Assignment:**

1. Locate  $-8$  on a number line and then locate its opposite.

2. Locate 6 on a number line and then locate its opposite.

3. Locate  $-4$  on a number line and then locate its absolute value.

4. Locate 2 on a number line and then locate its absolute value.

5. How far from the origin is  $|-10|$ ?

$$\boxed{10}$$

6. What is the value of  $7 - |-7|$ ?

$$\begin{aligned} 7 - |-7| &= 7 - 7 \\ &= \boxed{0} \end{aligned}$$

7. Simplify  $|17 - 6 - 1|$ .

$$\begin{aligned} |17 - 6 - 1| &= |11 - 1| \\ &= |10| \\ &= \boxed{10} \end{aligned}$$

8. Simplify  $|(17 - 6 - 1)/2|$ .

$$\begin{aligned} |(17 - 6 - 1)/2| \\ &= |(11 - 1)/2| \\ &= |10/2| = |5| \\ &= \boxed{5} \end{aligned}$$

9. Simplify  $|-2| + 6 - 7$ 

$$\begin{aligned} & |-2| + 6 - 7 \\ & = 2 + 6 - 7 \\ & = 8 - 7 = \boxed{1} \end{aligned}$$

10. Simplify  $(5 + |-17|) - 3^2$ 

$$\begin{aligned} & (5 + |-17|) - 3^2 \\ & = (5 + 17) - 3^2 \\ & = 22 - 9 \\ & = \boxed{13} \end{aligned}$$

11. In the following table, fill in the blank areas with the appropriate integer that best describes the phrase, its opposite, and its absolute value.

Description	Integer	Opposite	Absolute value
A 15 yard penalty	<b>-15</b>	<b>15</b>	<b>15</b>
An 11 yard gain	<b>11</b>	<b>-11</b>	<b>11</b>
A bank <b>withdrawal</b> of \$36	<b>-36</b>	<b>36</b>	<b>36</b>
8 points <b>off</b> on a test question	<b>-8</b>	<b>8</b>	<b>8</b>
Thrown for a loss of 3 yards	<b>-3</b>	<b>3</b>	<b>3</b>
4 points above average	<b>4</b>	<b>-4</b>	<b>4</b>

Use the number line above to fill in the appropriate symbol ( $<$ ,  $>$ , or  $=$ ) in the blanks in the examples below. Give the reasons for your choices.

12.	$5 \underline{>} -15$	<i>because 5 lies to the right of -15</i>
13.	$-15 \underline{<} -10$	<i>because -15 lies to the left of -10</i>
14.	$x \underline{<} y$	<i>because x lies to the left of y</i>
15.	$z \underline{>} 0$	<i>because z lies to the right of 0</i>
16.	$ -10  \underline{>} -10$	<i>Because <math> -10  = 10</math> &amp; is to the right of -10</i>
17.	$0 \underline{>} x$	<i>because 0 is to the right of x</i>
18.	$ y  \underline{=} 5$	<i>Because <math> y </math> is 5 units to the left of 0 &amp; <math>= 5</math></i>
*19.	$-x \underline{>} y$	<i>because -x is the opposite of x</i>

20. Redraw the number line given on the previous page and locate  $-y$ .

21. Redraw the number line given on the previous page and locate  $-z$ .
